DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hosoda et al (6,738,402) in view of Lee et al (5,789,768). The reference to Hosoda teaches the main structural features of the invention. For example, as shown in FIG. 4, Hosoda forms a substrate(201), a first cladding layer (212), an active layer (213), a second cladding layer (214), a "cushion" layer (241) which has a high resistivity, and a contact layer (251).

Hosoda also teaches using the same materials as claimed by applicants, including an AlGaInP active layer that also may be comprised of a multiple quantum well structure (col. 8, l. 64).

While Hosoda does not explicitly describe a transparent conductive layer formed on the contact layer, Lee describes such a layer (e.g. abstract), and given that Hosoda is also a light emitting device, such an element would be typically included in the Hosoda structure as well. In addition, Lee also teaches the formation of a Schottky barrier with the transparent conductive layer as recited in claim 43. See the discussion by Lee at col. 5, l. 5-20. Note also the DBR layer (80) formed by Lee in FIG. 5B.

Taken together, these references teach all of the features of the claimed invention, and one skilled in the art would be motivated to combine these references in order to maximize the efficiency of the light emitting devices.
